

EDGEKUTTER

Kut to the edge.

EDGEKutter

The EDGEKutter™ is a tool specifically developed for precision grinding and polishing of concrete, stone and wood surfaces. It incorporates the KR7 EDGEKutter dust shroud that enables virtually dust free operation with the use of an adequate vacuum system. Grind, sand and polish right up the EDGE of any obstruction without changing a thing.

Features & Benefits

Polish and grind right to the edge.

Dust ports for virtually dust free operation

Wet/Dry operation

Sturdy steel frame built to last

Spring loaded grinder tilt adds balance and eliminates abrupt movement

Positive Tilt adjustment keeps head level with contour of surface

Tension Throttle gently tilts polishing head

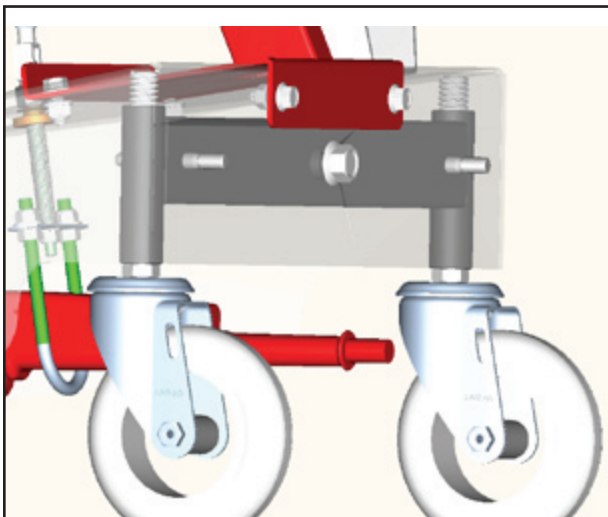

Rocker Pivot suspension maintains even contact

Switch from polisher head to grinder head in seconds (with purchase of optional head)

Handle height adjustment for operator comfort

EDGEKutter

The EDGEKutter floats over the surface gracefully creating a consistent scratch in the surface. The rocker pivot suspension enables the EDGEKutter to maneuver over undulations in the floor while maintaining flat and even contact between the abrasive wheel and the surface.

Adding the superior control is the unique spring loaded tension throttle that lifts the handle of the angle grinder/polisher and provides the control and feel required to grind, polish or sand.
